

Advanced Dashboard 4.0

Better understanding of document processes and information sharing within the organization

The advanced dashboard extends the standard dashboard statistics with analytic data regarding document processes and information sharing within one work space

Document processes

With the throughput time analysis tool one can analyse how documents of a specified lifecycle are processed within one workspace / substructure. The tool allows analysis of document lifecycles, specific lifecycle transitions and / or document inventory within the lifecycle.

The process owner can gain better understanding of the document processes and their bottlenecks and use that information for targetting corrective actions within the process.

Information sharing

The communication analysis tool allows analysis of information sharing within one workspace / substructure within a given period of time.

One can analyze information sharing in context of:

- Users that have read the same documents
- Users that have edited the same documents
- Users that have changes statuses of same documents
