

Kronodoc Outlook Connector 1.8

Store emails from Microsoft Outlook to Kronodoc to ensure that project-related communication is available to the organization.

The Kronodoc Outlook Connector extends Microsoft Outlook by adding a menu for storing one or multiple emails with its attachments into Kronodoc.

Mail header information (e.g. From, To, Subject, Send date) is transferred to Kronodoc properties to make the stored emails searchable.

Supported software versions

- Microsoft Windows XP, Vista 32- and 64 bit
- Microsoft Outlook 2007, 2003 and 2000
