

SmartPaste 4.0

Update contents of the project Work Breakdown Structure from a document package delivered by a 3rd party.

SmartPaste enables updating of documents and creation of new documents in the work breakdown structure based on document packages imported into Kronodoc by 3rd parties.

Using an additional supplier document number, SmartPaste can find corresponding documents from the WBS for editing or versioning or creation of new documents to appropriate folder(s) if a corresponding document cannot be found.

When used together with the Kronodoc notifications mechanism, updating of the contents of the work breakdown structure triggers notifications to the appropriate users.

SmartPaste 4.0 can function in two modes:

- SmartPaste, where the original package is kept for auditing purposes
- SmartMove, where the original package is removed after the update to minimize disk usage

PRODUCT FEATURES

- Copying of documents from document package (folder) to correct folder(s) in Work Breakdown structure
- Versioning of documents with same document number as document being copied
- Editing of documents with same document number and revision information as document being copied
- Copy done via preview screen that displays operations (create, edit, version) performed.
- Workspace level option to remove / keep the original document packages that have been copied (e.g. for auditing purposes)
