

# Kronomail 4.0

*Route email communication to be stored in Kronodoc*

Kronomail enables creation of document(s) into Kronodoc via email. One can route emails sent to specific email addresses / email domains to the Kronodoc server, which route the emails and their attachments to specified folders with specified document properties (and access control).

Kronomail can be used e.g. to act as a project email inbox / outbox to automatically store project related emails to specified folders for access to the project organization.

Other use case examples:

- Issue reporting via email (e.g. [support@kronodoc.com](mailto:support@kronodoc.com))
- Delivery of documentation by 3<sup>rd</sup> parties

## **Pricing Principles**

- Server based license fee
- Yearly support & maintenance fee
