

Now that we are well into 2008, it is a good time to take stock in what we have achieved and what challenges await. For Kronodoc Oy 2007 was a year of growth. We built our organisation and product comprehensively in order to better serve a growing clientele. We now have a Kronodoc staff 22 strong ready to take on new challenges. In addition to operational growth, our business also enjoyed growth, and profitable growth at that.

The first Kronodoc delivery agreement to China has been signed

Kronodoc Oy's partner within the marine industry, Deltamarin Ltd, has delivered the first Kronodoc installation to China, for Shandong Deltamarin Engineering Ltd which is an engineering company owned by Deltamarin and Weihai, a shipyard in the Shandong province. The objective of Deltamarin is to improve the information management of its networked customer projects, and to offer its customers more comprehensive information management services.

Fennovoima chose Kronodoc for their document management

Fennovoima Oy, a new Finnish energy company with a mission to build a new 1 500 - 2 500 MW nuclear power station, has chosen Kronodoc as their document management solution. Kronodoc system was implemented within Q1/2008. During the delivery phase the integral document management work practises were defined to support Fennovoima's short and long term objectives. The system will be used for managing administrative and technical documents.

M-real Kaskinen uses Kronodoc for managing plant documents

M-real Kaskinen BCTMP factory manages their plant documentation with Kronodoc. Building the Kaskinen BCTMP factory was completed in 2005. The project management of the implementation project was done by SWECO Industry Oy which managed the communication and document deliveries of the different parties with Kronodoc. Now,

during the production use of the plant Kronodoc continues to be used for managing the plant documents.

Kronodoc Connector for Documentum added to the EMC Partner Application Portfolio

Kronodoc Connector for Documentum has received the "Designed for EMC Documentum" accreditation and has been added to the EMC Partner Application Portfolio.

Kronodoc Connector for Documentum enables the use of the Kronodoc 3.4 product suite with content that is managed within EMC Documentum. Kronodoc 3.4 together with EMC Documentum provides a feature rich solution for managing documents in project deliveries ensuring regulatory compliance and auditability of all deliveries.

Kronodoc Software as a Service

Kronodoc Software as a Service (Kronodoc SaaS) is a new service model. Kronodoc SaaS provides Kronodoc customers with a new flexible way of purchasing and using Kronodoc applications for managing project and plant information, and contracts.

Kronodoc SaaS is a browser based, operating system independent solution model which has been designed with projects and companies of different sizes in mind. The company or the project does not have to acquire Kronodoc licenses or server hardware and database licenses separately. All of this can be leased for a length of time needed. The amounts of users and data can vary according to customer's needs during the different phases of the service.

Kronodoc SaaS does not tie up the customer, and is a risk free investment for example for investment projects. After finishing a project the final documentation can either be stored in Kronodoc or transferred to customer's own system. For more information, contact sales@kronodoc.com.

Kronodoc Day 2008

Mark this in your calendar - Kronodoc Day 2008 will be held in Espoo on 28.5.2008. You will receive more information on this in the near future. See You in Espoo!
